

Power BI Assignment 1 - Data Transformation, Data Modeling

Step 1:

Import Data:

- Import “List of Orders.csv” into Power BI.
- Open “List of Orders” in Power Query Editor by clicking on ‘Transform’.
- Import “Order Details.csv” and “Sales target.csv” into Power Query Editor.

List of Orders (1).csv

File Origin: 1252: Western European (Windows) | Delimiter: Comma | Data Type Detection: Based on first 200 rows

1. Create New Column:

- In the **Fields** pane, right-click on the table where the "City" and "State" columns are located.
- Select **New column** from the menu.

Enter DAX Formula: In the formula bar that appears, type the following DAX formula:

Location = [City] & ", " & [State]

The ampersand (&) operator concatenates values, and ", " adds the desired comma and space separator.

Merging Data (Joins):

☐ Step-by-Step Process

1 ☐ Open Power Query

- Go to Home → Transform Data

2□ Select Base Table

- Click on **List of Orders** (this will be your main table)

3□ Merge Queries

- Click **Home** → **Merge Queries** → **Merge Queries as New**

□ Choose **Merge Queries as New** (so original tables remain unchanged)

4□ Select Tables & Join Column

First Table	Second Table	Join Column
List of Orders	Order Details	Order ID

- Select **Order ID** in both tables
- Join Kind: **Left Outer** (all from **List of Orders**, matching from **Order Details**) ✓
(Recommended)

Click **OK**

5□ Expand Columns

- You will see a new column added (like a nested table)
- Click the **Expand icon** (□ arrow)
- Select the columns you want from **Order Details**
- Click **OK**

6□ Rename the Table

- Rename the new table to:

Orders Data

7 Apply Changes

- Click **Close & Apply**

Join Type

Meaning

- Left Outer Keeps all records from List of Orders
- Inner Join Only matching Order IDs from both tables
- Full Outer Keeps all records from both tables

	\$ Amount	Profit	Quantity	Category	Sub-Category	Profit Margin	Profit Status
1	41.00	-6		1 Furniture	Chairs	-0.146341463	Loss

PREVIEW DOWNLOADED ON WEDNESDAY

Data Modeling:

- Establish a relationship between the “List of Orders” and “Order Details” tables using

the 'Order ID' column.

- Build a relationship between the "Order Details" and "Sales Target" tables based on the 'Category' column. Click "Manage relationships" and ensure this relationship is Active.

The screenshot displays the Microsoft Power BI Desktop application window. The title bar indicates the file is "Power BI Assignment 1 - Data Transformation, Data Modeling" and was last saved on 1/27/2026 at 7:48 AM. The ribbon at the top includes tabs for File, Home, and Help, with various tools for data acquisition, transformation, modeling, and visualization. The main workspace shows a data model with the following tables and their columns:

- Monthly Sales Targets**: Order ID, Avg Profit, Category, Order Count, Sub-Category, Total Amount.
- Order Analysis**: Order ID, Category, Category Type, Profit, Profit Margin, Profit Status, Quantity.
- Order Details**: Order ID, Category, Category Type, Profit, Profit Margin, Profit Status, Quantity.
- Orders Data**: Order Date, Order ID, Amount, Category, CustomerName, Location, Profit, Profit Margin, Profit Status.
- Sales target**: Category, Month of Order Date, Target.
- List of Orders**: Order Date, Order ID, City, CustomerName, State.

Relationships are indicated by lines connecting the tables. A relationship exists between "Order Details" and "Sales target" on the "Category" column. The "Properties" pane on the right shows the "Tables" tab, listing all the tables in the model. The Windows taskbar at the bottom shows the system clock as 00:15 on 19-02-2026.
